

3D printer support removal agent

by RAISER MOON co.,ltd.

for paraffin wax-based
3D printer support materials

EXTRIPPER®
made in japan

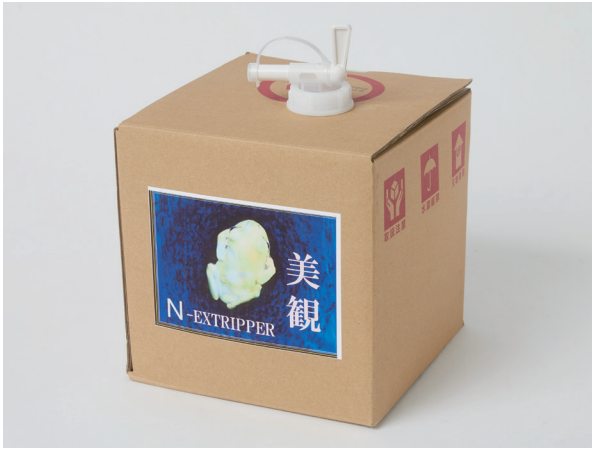

EXTRIPPER® JAM / BIKAN

The creation of EXTRIPPER® JAM/Bikan proudly developed in-house by our company, upends the philosophy of cleaning. The solid substance "JAM" and the liquid "Bikan" are made from everyday ingredients that are gentle on the environment. They can be used repeatedly without having to replace the liquid for a fixed period of time. They work on through holes smaller than 1mm and significantly reduce the time cost of paraffin wax-based support material cleaning.

EXTRIPPER® JAM
NET: 5L can/1L bag

EXTRIPPER® JAM is a specialty cleaning solution for paraffin wax-based 3D printer support materials. EXTRIPPER® JAM is semi-solid at room temperature, but when heated to ~80° C in preparation for cleaning, it becomes a liquid. The liquefied JAM is used by putting support-adhered workpieces into it. (60°C - 80°C).

EXTRIPPER® BIKAN
NET: 5 L

EXTRIPPER® Bikan is a finishing cleaning solution for paraffin wax-based 3D printer support materials. Workpieces with support material removed by JAM are put into Bikan (with ultrasonic waves at ~63°C) which converts the oil-based stains into water-based stains. The process is then finished off with a hot water bath (with ultrasonic waves at ~63°C).
